

# CLAIRE — Technique Candidates

Run date: 2026-08-16

---

Cross-platform workflow techniques surfaced this cycle. Test manually before considering any configuration change.

## 1. Constraint-Weighted Scoring Prompt [MEDIUM]

Before asking an AI for a recommendation, explicitly define hard constraints (budget, must-have features) and assign relative weights to soft criteria (e.g., portability 40%, performance 35%, price 25%). The AI then scores candidates against your weighted criteria and returns ranked results with justifications rather than generic suggestions.

Source signal: <https://news.ycombinator.com/item?id=46955606>

*Test: Before your next product or tool recommendation request, prepend a structured block listing your hard constraints and weighted priorities, then ask the AI to score each option against those weights and show its math.*
