

CLAIRE — Technique Candidates

Run date: 2026-05-31

Cross-platform workflow techniques surfaced this cycle. Test manually before considering any configuration change.

1. Persistent Role Instruction via Project/System Prompt [HIGH]

Users paste a detailed role definition and behavioral instructions into a project-level system prompt or custom instructions field so that every conversation in that context inherits the same expert persona and constraints without re-prompting. This avoids copy-pasting setup text into each new chat and keeps domain context always active.

Test: Create a project or custom instructions entry with a multi-sentence role definition (e.g., 'You are a [domain] expert...') and open several new chats within it to verify the persona persists without re-stating it each time.

2. Explicit Anti-Hallucination Constraint in Prompt [HIGH]

Users add an explicit instruction to the prompt telling the AI not to invent or assume information, and to ask for clarification when it lacks sufficient detail. This is described as a portable addition to any base prompt that reduces fabricated outputs in high-stakes or factual domains.

Source signal: [/r/VAClaims/comments/1tk082g/steal_my_claude_prompt/](https://news.ycombinator.com/item?id=47561773), <https://news.ycombinator.com/item?id=47561773>, <https://news.ycombinator.com/item?id=44549209>

Test: Append the phrase 'Do not assume anything not explicitly stated; if information is missing, ask me a clarifying question instead of guessing' to an existing prompt and compare output accuracy on a domain-specific task.

3. Situation-First Framing for Recommendations [HIGH]

Users describe their full situation or context upfront before asking for recommendations, rather than asking a generic question. Providing concrete situational detail (trip destination, event type, constraints) produces more relevant and complete output lists that include items the user had not thought of themselves.

Source signal: <https://news.ycombinator.com/item?id=47561773>, [/r/VAClaims/comments/1tk082g/steal_my_claude_prompt/](https://news.ycombinator.com/item?id=47561773), <https://news.ycombinator.com/item?id=44549209>

Test: Before asking for any recommendation, write 2-3 sentences describing your specific situation, constraints, and goal, then ask the recommendation question and compare the result to a version where you asked the question alone.
