

CLAIRE

Claude Configuration Signal Report — 2026-07-26 — Cycle 14

Signal Summary

Run date: 2026-07-26

Posts scanned: 57

Signal Breakdown

Category	Count
behavior_complaint	10
workflow_gap	8
feature_praise	14
competitor_gap	0
cross_platform	0
noise (dropped)	25

Developer Signal Disposition

34 developer-persona posts filtered at cross-reference gate per locked pipeline configuration (filter_out).

Official Signal — Capability Deltas

Official-signal lane disabled in config this run.

Track A — Claude Native Signal

Memory Edit Candidates

No memory edit candidates this cycle. Signal below evidence threshold or no patterns identified.

Profile Diff Candidates

No profile diff candidates this cycle.

Behavior Watch List

Patterns flagged for monitoring — not yet actionable. Check against personal session notes before next cycle.

- **Multiple users report Claude inserting unsolicited moral commentary or lectures into responses unrelated to the task, which conflicts directly with this user's configured preference for brevity and accuracy over hedging.**

Why not actioned: Only 2 posts in the input — below the 3-post evidence threshold required to generate a candidate.

- **Users describe Claude producing verbose internal reasoning or filler output before reaching substantive answers, increasing latency and token waste.**

Why not actioned: Only 2 posts in the input — below the 3-post evidence threshold required to generate a candidate.

- **Community interest in structured multi-attribute decision frameworks with weighted scoring and sensitivity analysis as a prompt pattern for vendor/product evaluation.**

Why not actioned: Only one post in the input; evidence threshold requires 3 or more distinct posts before a candidate can be generated.

Track B — Competitor Gap Signal

Skill Draft Candidates

No skill draft candidates this cycle. Competitor gap signal below evidence threshold of 3 corroborating posts. This is expected in early cycles — pattern builds over weekly runs.

Profile Addition Candidates

No profile addition candidates this cycle.

Eval Loop Status

Applied Changes Pending Eval

Review `change_log.json` for changes applied since last digest. For each change where a relevant session has occurred, add an eval note:

2026-07-26 | [session context] | held/partial/no | [one sentence notes]

Friction Log Reminder

Update `friction_log.txt` (project root — not data/) this week. 2-4 entries. Specific behaviors in specific contexts. Blank weeks score everything MEDIUM next cycle — the cross-reference gate loses precision.

Quarterly Eval

If quarterly eval is due: feed change_log.json and friction_log.txt to Claude. Request eval report. Revert changes that did not hold. Flag source signal from reverted changes as low-quality in archive.

CLAIRE-A Shadow Decisions

Engine evaluated 0 candidates (claude-opus-4-5): 0 apply | 0 skip | 0 defer

Engine Session Notes

Empty candidate batch - no decisions required. Pipeline ran successfully (assembler v2.0.0) with zero candidates entering intake. This is the first cycle since c9-pipe-001 (source URL suppression) was applied on 2026-07-19; an empty batch could indicate the suppression rule is working as intended on a slow signal week, or it could mask intake issues upstream of the assembler. Recommend verifying scraper health if next cycle is also empty. Secondary observation: eval_history remains empty after 73 applied changes - the hypothesis-outcome loop is not closing, which means confidence calibration has no empirical basis. Tertiary observation: model routing block c8-prof-001 is now 43 days old and references models current as of June 2026; if model releases have occurred since then, the block is overdue for review per its own stated maintenance rule.
