

CLAIRE

Claude Configuration Signal Report — 2026-06-28 — Cycle 10

Signal Summary

Run date: 2026-06-28

Posts scanned: 59

Signal Breakdown

Category	Count
behavior_complaint	7
workflow_gap	5
feature_praise	27
competitor_gap	0
cross_platform	0
noise (dropped)	20

Developer Signal Disposition

41 developer-persona posts filtered at cross-reference gate per locked pipeline configuration (filter_out).

Official Signal — Capability Deltas

Official-signal lane disabled in config this run.

Track A — Claude Native Signal

Memory Edit Candidates

No memory edit candidates this cycle. Signal below evidence threshold or no patterns identified.

Profile Diff Candidates

No profile diff candidates this cycle.

Behavior Watch List

Patterns flagged for monitoring — not yet actionable. Check against personal session notes before next cycle.

- **Claude defaults to execution mode (writing code, editing files) when users signal they want collaborative thinking or problem exploration first.**

Why not actioned: Only one post describes this behavior directly; evidence threshold of 3 not met.

- **Claude's content moderation is flagging legitimate scientific and domain-specific research queries (immunology, biology) as potentially harmful, blocking valid professional use.**

Why not actioned: Only one post addresses this pattern with sufficient specificity; insufficient posts to meet the 3-post threshold.

- **Account suspension and anomaly detection issues affecting non-US users and VPN users, resulting in opaque enforcement with no actionable recourse.**

Why not actioned: Platform-level policy and trust-and-safety issues; not addressable through user configuration changes regardless of post count.

Track B — Competitor Gap Signal

Skill Draft Candidates

No skill draft candidates this cycle. Competitor gap signal below evidence threshold of 3 corroborating posts. This is expected in early cycles — pattern builds over weekly runs.

Profile Addition Candidates

No profile addition candidates this cycle.

Eval Loop Status

Applied Changes Pending Eval

Review `change_log.json` for changes applied since last digest. For each change where a relevant session has occurred, add an eval note:

2026-06-28 | [session context] | held/partial/no | [one sentence notes]

Friction Log Reminder

Update `friction_log.txt` (project root — not data/) this week. 2-4 entries. Specific behaviors in specific contexts. Blank weeks score everything MEDIUM next cycle — the cross-reference gate loses precision.

Quarterly Eval

If quarterly eval is due: feed change_log.json and friction_log.txt to Claude. Request eval report. Revert changes that did not hold. Flag source signal from reverted changes as low-quality in archive.

CLAIRE-A Shadow Decisions

Engine evaluated 0 candidates (claude-opus-4-5): 0 apply | 0 skip | 0 defer

Engine Session Notes

Empty candidate batch received. No decisions to render. Memory state contains 63 entries with most recent changes dated 2026-06-13 (15 days prior). Eval history remains empty — no hypotheses have been measured against outcomes since pipeline inception. Two observations for pipeline monitoring: (1) If next batch is also empty, verify source feed health and digest pipeline execution. (2) The hypothesis-to-eval loop has never closed — 73 change_log entries exist with zero eval_history data points. Consider prioritizing eval infrastructure to enable hypothesis validation. No anomalies in memory state or change_log structure. Schema note from assembler acknowledged: memory_edit entries lack summary field, using hypothesis as proxy.
