

CLAIRE

Claude Configuration Signal Report — 2026-06-21 — Cycle 8

Signal Summary

Run date: 2026-06-21

Posts scanned: 4

Signal Breakdown

Category	Count
behavior_complaint	1
workflow_gap	0
feature_praise	0
competitor_gap	0
cross_platform	0
noise (dropped)	3

Developer Signal Disposition

3 developer-persona posts filtered at cross-reference gate per locked pipeline configuration (filter_out).

Official Signal — Capability Deltas

Official-signal lane disabled in config this run.

Track A — Claude Native Signal

Memory Edit Candidates

No memory edit candidates this cycle. Signal below evidence threshold or no patterns identified.

Profile Diff Candidates

No profile diff candidates this cycle.

Behavior Watch List

Patterns flagged for monitoring — not yet actionable. Check against personal session notes before next cycle.

Nothing on watch list this cycle.

Track B — Competitor Gap Signal

Skill Draft Candidates

No skill draft candidates this cycle. Competitor gap signal below evidence threshold of 3 corroborating posts. This is expected in early cycles — pattern builds over weekly runs.

Profile Addition Candidates

No profile addition candidates this cycle.

Eval Loop Status

Applied Changes Pending Eval

Review change_log.json for changes applied since last digest. For each change where a relevant session has occurred, add an eval note:

2026-06-21 | [session context] | held/partial/no | [one sentence notes]

Friction Log Reminder

Update friction_log.txt (project root — not data/) this week. 2-4 entries. Specific behaviors in specific contexts. Blank weeks score everything MEDIUM next cycle — the cross-reference gate loses precision.

Quarterly Eval

If quarterly eval is due: feed change_log.json and friction_log.txt to Claude. Request eval report. Revert changes that did not hold. Flag source signal from reverted changes as low-quality in archive.

CLAIRE-A Shadow Decisions

Engine evaluated 0 candidates (claude-opus-4-5): 0 apply | 0 skip | 0 defer

Engine Session Notes

Empty candidate batch - no candidates passed assembler selection for this cycle. This is a valid no-action state after 8 cycles of active profile refinement. Memory state contains 63 entries covering major behavioral categories (epistemic discipline, document handling, compliance methodology, session management, model routing). Change log shows recent structural improvement (c8-prof-001 routing block) that reduces future maintenance burden on version-specific guidance. No eval history available to assess hypothesis outcomes from prior cycles - recommend prioritizing eval scoring

integration before next digest to enable feedback loop. Pipeline healthy; no upstream failures indicated.
