

CLAIRE — Technique Candidates

Run date: 2026-05-24

Cross-platform workflow techniques surfaced this cycle. Test manually before considering any configuration change.

1. Persistent System-Level Role Prompting via Project Instructions [MEDIUM]

Users paste a detailed, structured role prompt into a project or system instructions field so the AI consistently applies expert framing, constraints, and behavior across all sessions without re-prompting each time. The technique involves defining domain expertise, behavioral guardrails, and scope in a single reusable block.

Test: Create a project in Claude or ChatGPT, paste a detailed role and constraint prompt into the system instructions, then run several queries to verify the persona and rules persist automatically.

2. Multi-File Upload for Comparative Document Analysis [MEDIUM]

Users upload multiple related documents simultaneously and instruct the AI to compare, reconcile, or score them against each other. This offloads manual cross-referencing to the AI and works across ChatGPT, Claude, and Gemini.

Test: Upload two versions of a document (e.g., two answer keys or two drafts) to any AI tool and prompt it to identify all differences and produce a reconciled summary.
